

The class "European Competition Law for Energy and the Environment" covers the intersection of European competition law, energy markets, and environmental regulations. It aims to provide an in-depth understanding of how competition rules and policies within the European Union (EU) affect the energy sector and environmental considerations.

The course delves into various aspects such as the regulatory framework governing competition law in the EU, including the control of monopolistic practices, mergers, and anti-competitive behavior within the energy industry.

Students could explore case studies, legal precedents, and the practical application of these laws in the context of energy markets and environmental sustainability.

Additionally, the course addresses how competition law interacts with the transition towards cleaner energy sources, sustainable practices, and the promotion of environmental protection within the European market. It covers the impact of competition regulations on renewable energy initiatives, carbon pricing, emission regulations, and the promotion of energy efficiency.
